

What Is Claimed Is:

1. A portable telephone set, comprising:

call termination notification means for notifying a user
of said portable telephone set of termination of a telephone
5 call;

key inputting means including a plurality of keys for
accepting a key inputting operation of any of said keys by the
user;

key input discrimination means for discriminating whether
10 the key inputting operation of said key inputting means is valid
or invalid;

key input validity notification means operable when said
key input discrimination means discriminates that the key
inputting operation is valid for causing said call termination
15 notification means to notify the user of the validity of the
key inputting operation with a first pattern set in advance;
and

key input invalidity notification means operable when
said key input discrimination means discriminates that the key
20 inputting operation is invalid for causing said call termination
notification means to notify the user of the invalidity of the
key inputting operation with a second pattern set in advance
and different from the first pattern.

2. A portable telephone set as claimed in claim 1, wherein
25 said call termination notification means includes at least one
of a speaker, a vibrator, a liquid crystal display device, a

liquid crystal display backlight and a key backlight.

3. A portable telephone set as claimed in claim 2, wherein
at least one of said vibrator, liquid crystal display device,
liquid crystal display backlight and key backlight of said call
5 termination notification means is rendered operative when said
portable telephone set is used in a mode wherein no sound is
generated from said portable telephone set.

4. A portable telephone set as claimed in claim 1, further
comprising a memory for storing key allocation information
10 representative of whether each of said keys is valid or invalid
when a selected menu is to be processed, said key input
discrimination means using the key allocation information to
discriminate whether the key inputting operation is valid or
invalid.

15 5. A key operation validity/invalidity notification
method for a portable telephone set which includes call
termination notification means for notifying a user of said
portable telephone set of termination of a telephone call and
key inputting means including a plurality of keys for accepting
20 a key inputting operation of any of said keys by the user,
comprising:

a key input discrimination step of discriminating whether
the key inputting operation of said key inputting means is valid
or invalid; and

25 a key input validity/invalidity notification step of
causing, when it is discriminated that the key inputting

operation is valid, said call termination notification means to notify the user of the validity of the key inputting operation with a first pattern set in advance but causing, when it is discriminated that the key inputting operation is invalid, said
5 call termination notification means to notify the user of the invalidity of the key inputting operation with a second pattern set in advance and different from the first pattern.

6. A key operation validity/invalidity notification method as claimed in claim 5, wherein said call termination
10 notification means includes at least one of a speaker, a vibrator, a liquid crystal display device, a liquid crystal display backlight and a key backlight.

7. A key operation validity/invalidity notification method as claimed in claim 6, wherein at least one of said vibrator,
15 liquid crystal display device, liquid crystal display backlight and key backlight of said call termination notification means is rendered operative when said portable telephone set is used in a mode wherein no sound is generated from said portable telephone set.

20 8. A key operation validity/invalidity notification method as claimed in claim 5, further comprising a key allocation information storage step of storing, when a menu is selected on said portable telephone set, key allocation information representative of whether each of said keys is valid or invalid
25 when the selected menu is to be processed into a memory, the key input discrimination step using the key allocation

information to discriminate whether the key inputting operation is valid or invalid.

9. A program for a portable telephone set which includes call termination notification means for notifying a user of said portable telephone set of termination of a telephone call and key inputting means including a plurality of keys for accepting a key inputting operation of any of said keys by the user, said program causing a computer to execute the steps of:

discriminating whether the key inputting operation of said key inputting means is valid or invalid; and

causing, when it is discriminated that the key inputting operation is valid, said call termination notification means to notify the user of the validity of the key inputting operation with a first pattern set in advance; but

causing, when it is discriminated that the key inputting operation is invalid, said call termination notification means to notify the user of the invalidity of the key inputting operation with a second pattern set in advance and different from the first pattern.
